

# INTENDED USE OF PRODUCT.

A system to store items with wires that can get in the way. eg. T.V, hi-fi, games console etc. It will consist of a large cupboard area to store a tv and/or hi-fi, and a shelf below to hold dvd's or videos.

It will hang on a wall near a socket so the wires don't spread about the room. Also by hanging the system on the wall this will save space on units and desks.

The system will have a modern appearance, this way teenagers will be more likely to use it, if it looks attractive.

To give the system it's modern appearance I will make the system out of pine, which is cheap but is easy to work with. By making it out of pine this will give it a low price which will encourage customers to buy the product.

Problems could occur with size, as T.V's and hi-fi systems are not standard size, so if it was too be made to fit one T.V or hi-fi it is quite likely it wouldn't work/fit for another. However, if I was to make it too big, (this way all tv's and hi-fi's would fit) then it would look ugly, and would take up too much room.
